# VACA MUERTA INDUSTRIAL PARK

# THE PARK

The **Vaca Muerta Industrial Park** meets the growing demand for infrastructure in the most strategic region of Argentina's hydrocarbon sector. The project is designed for Oil & Gas suppliers seeking a strategic foothold. Spanning more than 30 hectares, the park offers **103 lots with clear title** and **immediate possession**.

# MACROECONOMIC CONTEXT

01

## Investment Opportunity:

According to the IMF, Argentina closed 2025 with 4.4% GDP growth, one of the strongest expansions in the region (the Latin American average was 2.4%), and projects the economy to grow 3.5% in 2026 and 4% in 2027, outpacing regional and global averages and consolidating a favorable environment for new investment.

02

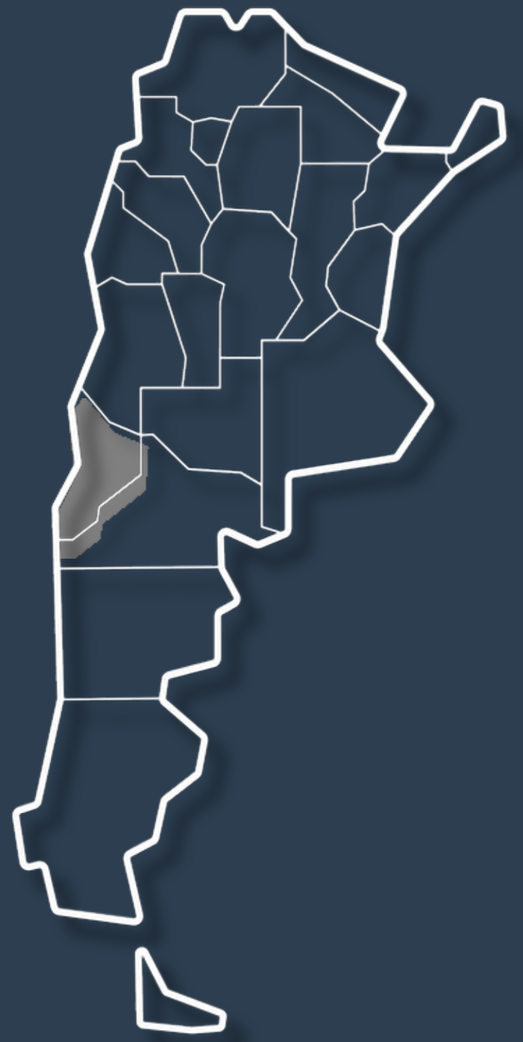

## Geographic Area:

Neuquén stands out for its strategic location in Patagonia and its importance in hydrocarbon production, particularly in the Vaca Muerta formation.

03

## Strategic Hub:

Añelo is one of the country's main logistics hubs for the industry, driving business and industrial activity and relevance nationwide.

# ENERGY SECTOR

In 2025, oil and natural gas production kept growing, driven by the expansion of Vaca Muerta. This enabled Argentina to close the year with an energy trade surplus of USD 7,815 million, the highest on record — and in the first half of 2026 the sector had already posted USD 6,987 million, up 87% year over year.

## Outlook

Crude output is projected to grow 14% in 2026 —already confirmed by first-half data— and another 16% in 2027, when it would surpass one million barrels per day.

## Exports

Oil exports are expected to exceed USD 17 billion in 2027.

## Growth

This balance has already secured Argentina's energy self-sufficiency —a second straight year of surplus— and keeps improving its trade balance: energy accounted for nearly 7 of every 10 dollars of the country's total trade surplus in 2025.

# VACA MUERTA

**255 trillion**
cubic feet of gas

**30,170 million**
barrels of oil

In April 2026, Vaca Muerta drove Neuquén to a record 628,924 barrels of oil per day (67% of the national total) and 101.2 million $m^3$ of gas per day (58% of the national total). The latest record came in July 2026: 912,966 barrels per day nationwide, the highest ever, with Neuquén contributing 72%.

According to The Economist, the sector could create between 250,000 and 500,000 jobs by 2030 (it already accounts for some 37,000 direct jobs). Foreign investment keeps upgrading infrastructure: the Argentina LNG project (YPF-Eni) expects its first LNG shipment in 2027, with Asian demand projected to grow through 2040.

# WHY INVEST IN THE PARK?

By mid-2026, the Neuquén Basin still accounts for virtually all of Argentina's shale production, setting new oil records month after month. Shale oil has been growing 20% to 35% year over year, depending on the month, while conventional output remains in structural decline. Shale now accounts for over 69% of national oil output —up from 66% at the start of the year— and for about 97% of total production in Neuquén.

Shale's share of national oil production

Shale - NB

**97%**

Neuquén Basin shale's share of oil production

# The Role of SMEs

Small and medium-sized enterprises (SMEs) play a crucial role in the development of Vaca Muerta. They have the opportunity to join its value chain, supplying essential inputs and services to the industry. Coordination among companies is key to avoiding extra costs and improving efficiency.

Integrating SMEs into Vaca Muerta will create hundreds of thousands of jobs, contributing to local economic development.

# MASTERPLAN

- Total area: 34 ha
- Number of lots: 103
- Lot area: 24 ha
- Lots from 1,350 m² to 4,350 m²

# ZONING PARAMETERS

## Subdivision

- Minimum frontage: 30 meters
- Minimum lot area: 1,000 $m^2$

## Setbacks

- Minimum setbacks: 5 meters front, 1 meter rear.
- Minimum side setback: 2 meters.

## Building

- Lot coverage: 0.70
- FAR: 0.85

## Permitted uses

- Industrial
- Retail and wholesale, with or without storage.
- Services

# SERVICES & INFRASTRUCTURE

Water supply

Fiber optics

Asphalt-paved streets

Street Lighting

Power grid

Sewer system

24/7 private security
